SKILLS

- Leadership
- Teamwork
- Problem-solving
- Time management
- Task management
- Web interface development with UX and UI
- Research and development

EDUCATION

Bachelor's Degree in Systems and Computer Engineering, 2020

- University of Sciences and Humanities
- Thesis defense approved
- Currently applying for degree

PROGRAMMING

WORPRESS
PHP
HTML y CSS
Javascript
Git
Laravel
React
Diseño Web
Figma
Zapier

ABOUT ME

Systems and Computer Engineering graduate. Proactive, eager to learn every day, a team player who adapts to the pace of work, responsible, and committed to achieving work goals. Extensive experience in web development and website administration. Proficient in software (Microsoft Office, Microsoft SQL Server, TeamViewer, Rational Rose, FileZilla, Packet Tracer-Cisco, among others). Knowledge of programming and layout languages for web development (PHP, JavaScript, HTML, CSS), frameworks (Bootstrap and Materialize), and content management systems (WordPress). Also experienced in desktop PC maintenance and repair.

WORK EXPERIENCE

PLAY Group Latam - Agencia de Marketing Digital (Noviembre 2020 - Julio 2026)

I worked for this agency for approximately 5 years, and my experience there was very positive. I started as a Front End Developer for about 3 years. During that time, I intuitively learned to create web designs in Figma, for both desktop and mobile. These designs were then developed into code.

I developed WordPress projects, including landing pages and websites, along with the admin panel. I worked on these projects independently, and this also included deploying them to the client's server.

I participated in Laravel website projects, where my role was to create the visual design. I worked alongside the Back End team, who handled the admin panel and deployment.

After this experience, I became the Software Area Leader, managing the various types of projects that came into the department, such as e-commerce projects, landing pages, websites with admin panels, bilingual websites, etc. The management of these projects involved direct contact with the client to understand their requirements, scope, and expectations, as well as team organization. I was also responsible for developing the project Gantt chart, estimating timelines with the team, and organizing pending tasks throughout the project's development. Together with the team, we reviewed the resources to be used, the project infrastructure, server proposals, and domain settings for the client. I have the knowledge and experience to develop diverse projects across various sectors. As part of my work, I have also participated in several projects as a programmer while simultaneously managing projects.

San Martin de Porres

- **Ecommerce:** I was part of this project managing requirements and scope, and I was the product owner. Programming languages such as Laravel and React were used.

- **KP Real Estate Landing Page: https://www.kpinmobiliaria.com/,** a website created entirely in WordPress, using a custom template built from scratch (HTML, CSS, JS, PHP). The forms are connected to the client's CRM.

- **SLIM Landing Page: https://slim.grupotyc.com,** a landing page managed by T&C, was developed in WordPress, PHP, HTML, CSS, and JavaScript. All the landing page content is manageable, and it has two forms directly connected to the Sperant CRM.

- **VARELA Landing Page: https://varela.grupotyc.com/,** a landing page managed by T&C Real Estate, was developed in WordPress, PHP, HTML, CSS, and JavaScript. All the landing page content is manageable, and it has two forms directly connected to the Sperant CRM.

- **PUERTO VIEJO Landing Page: https://lacaleta.com.pe/,** managed by the real estate company El Pino, was developed using WordPress, PHP, HTML, CSS, and JavaScript. All landing page content is manageable, and it includes a form connected to Zapier and email.

- **CENTRUM Minisite: https://maestriascentrum.com/,** managed by the agency, was developed using WordPress, PHP, HTML, CSS, and JavaScript. All website content is manageable, and it includes a form connected to an Oracle CRM and Zapier.

- **Dinet: https://dinet.com.pe/,** website developed in Laravel with Nuxt. I served as product owner and front-end developer.

- **Cyber Days: https://www.cyberdays.pe/,** for each Cyber Days campaign, I led website maintenance and administration. During the campaign, my role was to monitor the website and administration to ensure everything functioned correctly, communicate with participating businesses, and resolve any inquiries.

- **El Pino: https://www.elpino.com.pe/,** This website was developed using Next and Laravel. I managed the project from the beginning, holding meetings with clients to discuss requirements, scope, etc.

Certus San Miguel (January 2019 - March 2019)
I was transferred to the San Miguel location after my training at the Certus Callao center. I had the same responsibilities, serving as the right-hand person to the head of the learning center and overseeing the IT department.

Certus Callao (December 2019)
I received training in logistics, was in charge of security, responsible for monthly maintenance of the learning center, and managed the inventory of all learning center equipment.

Innova Educa Tech Academy (January 2019)
Instructor of courses in computer assembly (theory/practice), camera installation (theory/practice), software installation (installation of basic computer programs, antivirus software, browsers, types of computer viruses, operating system knowledge), and networking (introduction, types of networks, network topology, exercises with IP addresses).
I developed a manageable website for the academy, meeting all the coordinator's requirements. WordPress was used for content management, along with Elementor.

SeoMarketingPeru (April 2016 – February 2017: 11 months)
I worked in web development, creating manageable websites for various companies in different sectors (real estate, electronics sales, technology equipment stores, education, tourism, among others), as well as creating custom websites for professionals. Responsible for meetings with companies to gather requirements for the website, and for managing and maintaining all web pages for Seomarketingperu. Also provided support to the design department by creating images and logos for new companies. Used software such as FileZilla to upload files to the websites, accessing the servers.

University of Sciences and Humanities (August 2015 – November 2015: 4 months)
Provided support in the Systems department for the administration and maintenance of the University of Sciences and Humanities website, responsible for creating sections for cultural events, sporting events, conferences, among others.

HIGHER EDUCATION AND TRAINING

In Information Technology and Office

- Office Course: Microsoft Word, offered by Instituto SISE.
- Office Course: Basic Microsoft Excel, offered by Instituto SISE.
- Office Course: Microsoft PowerPoint, offered by Instituto SISE.
- Computer Tools Course: Microsoft Word, Microsoft Excel (Basic and Intermediate), Microsoft PowerPoint, offered by the Continuing Education Center of the University of Sciences and Humanities.
- Programming Language Course: PHP (Basic and Intermediate), offered by Centro Informático Sistemas Uní.

In Foreign Languages

- Complete Basic English Language Program, offered by the Peruvian-British Cultural Association (Británico).
- Complete Intermediate English Language Program, offered by the Peruvian-British Cultural Association (Británico).

Additional Courses

- Specialization Diploma in Project Management, offered by the UNI Diploma Programs Department.
- Project Management Course under the PMI approach.
